Article types

Reviews are concise, critical but constructive and conclusive topical accounts, written by experts in the field for non-specialists and covering aspects of the broad range of topics of concern to those working in the field of nutrition and health.

Original research papers report the results of new studies.

Emerging Research papers are updates on new research projects, funded by, for example the EU or UK Research Councils. They describe the rationale, protocol and expected outcomes for new studies or give a summary overview of findings at the end of a project.

News and Views, Facts behind the Headlines or In Perspective articles may include comments on papers published elsewhere. Articles referring to the publication or content of recently published official documents and a discussion or comment on the impact of legislation may also come under this category.
